

Nguyen Thi My Phuong

BUSINESS ANALYST

0816625245 | myphuongvlo.2020@gmail.com | District 3, Ho Chi Minh City

PROFESSIONAL SUMMARY

Business Analyst with ~3 years across AI-powered multi-tenant SaaS, greenfield ERP, and customer self-service portals. As sole BA, specified a two-system ERP and customer portal (40 modules) replacing legacy infrastructure for 15,000+ customers. Previously specified the retail-execution platform now processing ~500K AI evaluations per month for three Tier-1 FMCG accounts. Owns the full requirements lifecycle from elicitation through UAT sign-off, including BPMN 2.0 process modeling, UI design in Figma, and defining the business rules that AI features are scored against. Proficient in SDLC and Agile/Scrum.

AREAS OF EXPERTISE

Requirements & Documentation: Requirements Elicitation | Stakeholder Management | FIT-GAP Analysis | Impact Analysis | Change Request Management | User Stories & Acceptance Criteria | Use Case Specification | BRD/PRD/SRS | User Guide

Process Modeling & UI/UX: BPMN 2.0 (As-Is/To-Be) | Wireframes & Mockups | User Flows | Figma Design Review

Integration & Data: Cross-System Data Mapping | Integration Data Contracts | Data Reconciliation | Multi-Vendor Coordination

UAT & Quality Validation: UAT Planning & Execution | Test Scenarios & Scripts | Requirements Traceability (User Story to AC to Test Scenario) | Client Validation Sessions

Agile Execution: Agile/Scrum Framework | Sprint Planning | Backlog Refinement | Backlog Ownership | Release Planning

AI Product & Workflow: Business Rules for AI Features | AI Guardrails & Output Validation | Doc-Driven Specification Method

Tools: Jira | Confluence | Figma | Draw.io | Claude | ChatGPT | Gemini

PROFESSIONAL EXPERIENCE

Vietnix Solution and Technology JSC - Business Analyst

Oct 2025 - Present

Greenfield internal ERP and customer self-service portal for subscription lifecycle management. 2 integrated systems, 40 modules.

- **Sole BA on a greenfield build of two integrated systems** - a 26-module internal ERP and a 14-module customer storefront - serving 15,000+ customers migrating off the legacy platform.
- **Scoped the modules across both systems** - admin RBAC and role management, CRM and customer records, order-to-cash (orders, invoicing, credit balance, promotions, transactions), service catalog and pricing configuration, the self-service purchase journey, and support ticketing.
- **Specified the integration data contracts between the two systems**, defining field-level data mapping to keep data consistent across the full customer lifecycle.
- **Ran discovery workshops across 5 departments** (Sales & Marketing, Accounting, Product, Tech, Admin) - surfaced manual workarounds and pain points in each team's daily workflow, then translated the findings into MVP scope.
- **Authored 125+ User Stories, SRS and edge-case-driven Acceptance Criteria** on Confluence - minimizing requirement ambiguity and reducing development rework.
- **Modeled As-Is/To-Be processes for 15 core business flows** in BPMN 2.0 (Draw.io) and led iterative design reviews in Figma so both portals reflected the specified business rules, user flows and edge cases.
- **Achieved ~90% first-time UAT pass rate** - wrote test scenarios traceable to the User Stories and SRS, facilitated validation sessions with department leads, and drove each module through to sign-off.
- **Owned the Agile/Scrum process** - managed the Jira backlog, ran sprint planning and backlog refinement, aligned solution decisions with the Tech Lead, and clarified requirements for Dev, QC and UI/UX through the build.
- **Cut requirement preparation time by ~30% by building an AI-assisted specification workflow** - domain research, edge-case mapping, then AI-drafted User Stories, ACs, flows and UI, with manual validation gates before any draft was accepted.
- **Drove operational handover** via user guides and knowledge transfer to 5 departments, plus a post-implementation feedback loop feeding production insights back into the backlog. Platform production-ready, cutover pending.

NDS Viet Nam JSC - Business Analyst & Product Owner

Nov 2023 - Oct 2025

visibilityPRO - Enterprise AI-powered Retail Execution Platform (B2B multi-tenant SaaS for FMCG)

- **BA on a platform processing ~500K AI evaluations/month** for three Tier-1 FMCG accounts - Suntory PepsiCo/Pepsi (~400K/mo, 60K+ outlets), BEL/The Laughing Cow (~60K/mo), SABECO/Bia Saigon (~40K/mo) - moving display evaluation from manual review to AI scoring that returns results in seconds, giving an objective basis for reward payout and KPI sign-off.

- **Bridged business and AI engineering** - defined the business rules the AI scored against, evaluated model outputs against those rules, captured field-level edge cases and channeled structured feedback to the AI/ML team, supporting accuracy improvement from ~82% to ~90% (BEL) and ~95% (Suntory PepsiCo).
- **Authored PRDs, Blueprints and 250+ User Stories with edge-case-driven ACs**, plus BPMN 2.0 flows in Draw.io and production-ready web/mobile UI in Figma - delivering ~17 feature groups to production with minimal rework.
- **Specified the product across all three systems on the platform** - the internal Back Office, the Client Web Portal for enterprise customers, and the field Mobile App - where configuration set in the Back Office is applied down to the Client Web Portal, then synced onward to the Mobile App.
- **Ran client demo workshops to elicit requirements, then FIT-GAP analysis** - evaluated platform fit vs. net-new development, then proposed configurable feature extensions to satisfy client-specific needs without compromising platform reusability.
- **Owned the quality gate through to client sign-off** - verified builds on QA against the Acceptance Criteria once QC testing was done, wrote UAT scripts traceable to those ACs, then facilitated UAT sessions with trade marketing, IT and field-ops stakeholders through to sign-off and go-live.
- **Drove Agile delivery as Product Owner across 4 cross-functional teams** (Product, Dev, QC, AI/ML) - owned the Jira backlog, ran sprint planning and grooming, prioritized features and tracked Estimate vs. Actual to hold delivery dates.
- **Handed over operations to the client** - trained end users and authored user guides for trade marketing and field-ops teams.
- **Drove product improvements from post-go-live user feedback** - supported trade marketing and field-ops teams on production issues, captured enhancement requests from day-to-day usage, and prioritized them into the backlog.

Client Engagements Owned

- **BEL** (The Laughing Cow cheese) - **full BA lifecycle** across a **3-party flow**: specified the Sales App and Ops Portal, defined the **field-level data mapping and reconciliation rules** a third-party SFA vendor implemented, and set the recognition criteria the AI scored against before results returned to trade marketers. Coordinated across client tech teams, the external SFA vendor and NDS development, through UAT and post-deployment support. **Live, serving 1,500+ field salesmen monthly.**
- **SABECO** (Saigon Beer) - requirements gathering through specification handoff: ran **requirements analysis, FIT-GAP and As-Is/To-Be process modeling**, and produced the **full specification set** (PRD/SRS, User Stories with ACs, BPMN, Figma wireframes) plus **UAT scripts** for the delivery team. **Live, serving 1,000+ field salesmen monthly.**
- **Suntory PepsiCo** (Pepsi) - **AI shelf display and compliance** (SPVB SHOP app): outlet retailers photograph their own displays for AI scoring, unlike the salesman-driven SFA flow. Gathered requirements and ran **feature analysis** for the client web portal and the field mobile app, producing the **specification set and UAT scripts**. **Live, serving 30,000+ store owners.**

PERSONAL PROJECT

AnalyzeCV - AI-Powered Resume Analysis & Job Tracking Platform

Jun 2026 - Present

Self-built SaaS unifying CV-JD compatibility assessment with centralized application tracking, built to solve a problem encountered first-hand while job-hunting. Solo build, 0 to 1. Closed beta at analyzecv.vercel.app, iterating on tester feedback before public launch.

- **Traced the problem to a first-hand pain point rather than a paper idea** - mapped the As-Is/To-Be job-hunting workflow, sketched the product skeleton, then worked down into detailed analysis of each feature.
- **Prioritized scope by deciding explicitly what not to build** - no scraping or auto-apply, no CV rewriting, no recruiter self-signup, no commercial tiers yet. Kept the MVP on one focus: compatibility analysis and application history in one place.
- **Chose to build the UI in HTML rather than design it in Figma** - a deliberate trade-off for speed and cost, handed straight to implementation with no conversion step. Built the design system and color palette for the whole site.
- **Specified the product tightly enough to delegate implementation to an AI coding agent**, with manual validation gates at each stage before accepting output - the same doc-driven method later applied at work.
- **Tested the user journey after each feature build** and triaged beta-tester feedback into a backlog prioritized by severity.

EDUCATION

Ho Chi Minh University of Banking - Management Information Systems

2020 - 2024

COURSES & CERTIFICATIONS

IIBA - Business Analysis Foundations (2024) | IIBA - Business Analyst and Project Manager Collaboration (2024) | TrueSkill Center - Advanced Skills for BA/PO and Technical Business Analyst (Nov 2023 - Mar 2024)
